Spec. DEF STAN 81-41 Part3/4 Par. 14 and 24 Photo Yes Amb. Temp. 25 ± 10°C

Requirements:

Pre-Conditioning:

Temperature: 25 ± 10 °C
Humidity: 45% to 75%
Duration: 16 hours or until specimen has reached temperature stabilization (whichever is the shortest period)

Vibration:

Test Level: ± 0.23" (± 6 mm) peak (0.46" DA) from 5 to 9 Hz and ±2g peak from 9 to 350 Hz
Sweep Rate: 0.75 ± 0.25 octave per minute
Test Duration: Depending on test specimen weight, see below
Orientation: Depending on test specimen weight see below

Test Method:

Weigh the test specimen.

Place the test specimen in a test chamber on the face on which it normally is expected to be transported or stored. Install a thermocouple on the test specimen. Maintain the chamber at 25 ± 10 °C and 45% to 75% relative humidity for 16 hours or until the specimen has reached temperature stabilization (i.e. test specimen temperature stable with chamber temperature).

After pre-conditioning:

Immediately after removal from the conditioning chamber strap the test specimens to a vibration machine. Subject the test specimens to the following vibration test. Axis designations are to be Top to Bottom, Side to Side, and Front to Back.

For each test specimen whose weight is up to and including 154.3 pounds (0-70 kg), vibrate each test specimen for 2 hours in each of the three mutually perpendicular axis at a vibration amplitude of ± 0.23" (± 6 mm) peak (0.46" DA) from 5 to 9 Hz and ±2g peak from 9 to 350 Hz and a sweep rate of 0.75±0.25 octave per minute.

NOTE: If because of the geometry of the test specimen, it is considered impractical or unnecessary to vibrate the test specimen in a particular axis, the test specimen shall be vibrated for 3 hours in each of the two remaining axis.

Perform a visual examination. Any malfunction of the fittings and hardware (seals, closures, hinges, handles, etc.) and any damage to or spillage of the package contents shall constitute a failure of the specimen. Minor visible deterioration of the test specimen shall be noted but does not necessarily constitute failure of the test specimen.

Test Results:

All testing was performed per the Test Method and Requirements stated above. No visual evidence of damage was observed upon completion of testing in each axis.

Requirements:

Temperature: -40 ± 2 °C
Duration: 16 ± 0.5 hours after specimen has reached test temperature or 7 days
 ± 1 hour if time required for the complete package to attain the
temperature cannot be assessed

Test Method:

Place the test specimen in a test chamber on the face on which it normally is expected to be transported or stored. Install a thermocouple on the test specimen. Decrease the chamber temperature to -40 ± 2 °C at a rate not to exceed 3 °C per minute. Maintain the chamber at -40 ± 2 °C for either:

- 1) 16 ± 0.5 hours after specimen has reached test temperature or
- 2) 7 days ± 1 hour if time required for the complete package to attain the temperature cannot be assessed.

Return the chamber temperature to 20 ± 10 °C at a rate not to exceed 3 °C per minute.

Perform a visual examination. The package is considered to have failed if it is unserviceable or is affected in any way which would potentially cause the test specimen to become unserviceable.

Test Results:

All testing was performed according to the Test Method and Requirements stated above. No visual evidence of damage was observed upon completion of the test.
